

Movie App Task – Angular

Using TheMovieDB API: <https://www.themoviedb.org/documentation/api>

Build a web app using the following:

- Angular
- Firebase as a backend

features required:

- create account
- login
- view movies with a filter to toggle between (top movies - upcoming movies - now playing movies).
- view movie page (The movie card (UI) should include an action buttons to comment, like, add/remove to favorite, and reply to a comment)
- for the favorite movies and comments...etc (use local storage)
- favorite page (with remove feature)
- simple chat with online users.

Please follow Angular best practices
